Tip:

The chip support list is subject to the latest version of the software. SLFY Technology may change the above list at any time, including adding/deleting/modifying, without prior notice

The SLFY programmer is based on the official specification book of the chip to write its corresponding burning algorithm. For chips that do not meet the functions and parameters described in the specification book (including problematic chips/counterfeit chips, etc.), normal operation will not be guaranteed

Please use the original SLFY burner (adapter), otherwise it may cause the programmer to malfunction and may damage the equipment

The ISP burning method is affected by the user's target line and lead length, and cannot guarantee successful burning. Please try to burn using a socket as much as possible
